

PLATFORM GUIDE FOR MSPs

Deliver your clients from cyber risk

Become the MSP your clients need to protect
against the ever-increasing threat of cyber attacks.

Amplify your MSP value with ConnectSecure

Purpose-built by MSPs for MSPs, the ConnectSecure Vulnerability and Compliance Management platform empowers you to harden the attack surface of your clients amid rising cyber threats and compliance pressures. With a global Governance-Risk-and-Compliance (GRC)-centric view, you get real-time insights into all client assets, both networked and cloud-based, right from the login screen. Ramping up your cybersecurity practice has never been easier.

Build Cyber Resilience

Reap the benefits of assessing your own cybersecurity practice. Your customers will want the same optimal protection.

Boost Credibility

Lead by example to show you understand the significance of compliance and vulnerability detection. Your customers will reward your diligence.

Power Sales

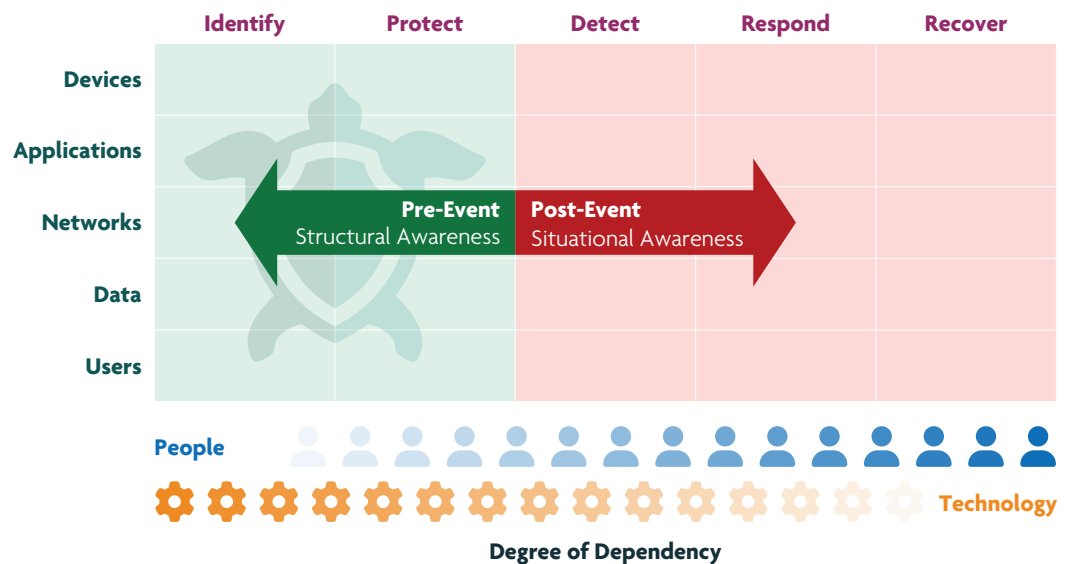

Introduce an informed discussion about risk. Your customers will appreciate your expertise.

Target vulnerabilities and become the partner every business needs

Here's a message for your clients: Prevention is more affordable than going to war. ConnectSecure enables you to put that argument to practice, identifying, prioritizing, remediating, and reporting on security gaps across networks and private-hosted applications, IoT, cloud applications, and more. By introducing an easy and risk-free way to prevent exploitation, your clients won't be the only winners.

Focus on the pre-event side of the NIST Cyber Defense Matrix

The first two functions of the matrix—Identify and Protect—both serve to minimize vulnerabilities, unlike Detect, Respond, and Recover which define what the response to an attack looks like once it occurs. The ConnectSecure platform focuses on Identify and Protect—reducing the number of episodes that require activation of the next three steps.

Leverage continuous assessments. Wow with in-depth reports. Enjoy revenue growth.

ConnectSecure helps you broach the crucial topic of proactive cybersecurity and deliver value from the outset:

Uncover everything with a vulnerability assessment (agent-based or probe/lightweight) and ensure adherence to key standards and regulations, such as CIS, GDPR, HIPAA, NIST 800-171, NIST 800-53, PCI DSS, and more.

Generate in-depth, white-labeled reports, conveying your clients' Consolidated Risk Score as well as scores for all assessment areas, and so much more.

Build recurring revenue with continuous external and domain-level scans, featuring automated remediation and prioritization of critical threats as a result of our integration with the National Vulnerability Database (NVD) and the Exploit Prediction Scoring System (EPSS).

Built by MSPs for MSPs, we know exactly what you need

No Long-Term Contract

Pay as you go, so you're never locked into a contract you're not profiting on.

The Right Price

Start paying \$100s—not \$1,000s.

Convenient to Deploy

Integrates with your existing tools—Azure, ConnectWise, Microsoft Teams, and more.

Easy to Use

ConnectSecure is cloud-based and fully automated with user-friendly dashboards.

Multi-Tenant

Because you need to manage more than one client.

Community-Driven

Weekly partner calls help us keep our finger on the pulse of your needs.

Why use several tools when you can have it all in one?

Our platform gets the job done, whether you aim to run a vulnerability assessment, conduct vulnerability remediation, or ensure regulatory compliance.

Identify

Identify risks and vulnerabilities across devices, networks, and applications to proactively strengthen your clients' security posture.

- Vulnerability Assessment:
- Device, Network & Application Discovery
- One Agent
- External Scanning
- Compliance Assessment
- Risk Assessment
- Cloud Assessments
- Asset & Network Documentation

Monitor

Continuously monitor vulnerabilities, compliance, and attack surfaces to safeguard your clients' critical assets and data integrity.

- Continuous Vulnerability Management
- Continuous Compliance Management
- Attack Surface Scanning
- PII Scanning
- Application Baseline Audit
- Active Directory & Entra ID

Remediate

Efficiently patch operating systems and applications with prioritized guidance to maintain compliance and reduce risks.

- Operating System Patching
- Application Patching
- Guidance on Compliance Action
- EPSS Prioritization

Report

Deliver tailored, professional-grade reports with detailed insights, role-specific access, scheduling flexibility, and white-label branding for clear client communication.

- Local/Cloud Active Directory Reporting
- Role-Based Ready Reporting
- Dashboard Views
- Custom Report Builder
- Report Scheduler
- Assessment Reports
- White-Label Reports

Paul Rouse

President and Owner of
Rouse Consulting Group

“The ability that ConnectSecure has given us to validate other toolsets is hugely important. It has really transformed a lot of our internal operations and provided tremendous value.”
